

Glebs Labunskis

📍 Delft, Netherlands ✉ glebs.labunskis@gmail.com 📞 (+371) 20213199 🌐 [glebs-labunskis](https://glebs-labunskis.com)

Professional Summary

Backend Developer focused on Java, Spring Boot, microservices, and REST APIs in enterprise environments. Experience includes owning a core archive service, Java modernization, test coverage improvements, API performance work, and Azure-based delivery. Strong focus on maintainability, reliability, and clear backend design.

Technical Skills

Languages: Java, Python, Scala, PL/SQL, JavaScript

Frameworks: Spring Boot, Hibernate, Vue.js, Flutter

Cloud/DevOps: Azure, CI/CD pipelines

Databases: PostgreSQL, Oracle DB

Testing: JUnit, Mockito, Vitest, Postman, SoapUI

Tools: Git, GitLab, Cursor IDE, GitHub Copilot

AI-assisted development: Claude/OpenAI models for debugging, code review, refactoring, documentation, and test generation

Concepts: Microservices, REST APIs, Agile, Software Architecture, SuiteScript

Key Projects

Connector Administration Platform

Built backend functionality in Spring Boot for a centralized connector tracking platform used across ABN Amro service teams, adding services, APIs, DTOs, and exception handling for external integrations. Led front-end development in Vue.js, delivering features, views, bug fixes, and Vitest-based tests to reduce data duplication and improve cross-team visibility.

Distributed Food Chain Management System

Built a distributed restaurant and order management system of four microservices using Spring and Hibernate, achieving over 90% test coverage with JUnit and Mockito and validating endpoints with Postman.

Live Q&A Web Application

Built an interactive Q&A web application using Spring Boot, Hibernate, and REST APIs, contributing requirement analysis, Scrum planning, and front-end coordination during feature delivery.

Certifications

Microsoft Certified:

Azure Fundamentals (AZ-900), 2025

Languages

Russian: Native

English, Latvian: Fluent

Professional Experience

Backend Developer

ABN Amro, Amsterdam

Jan 2025 – Present

- Responsible for the document folder operations service, one of the core archive services, and supported delivery across four environments from development to production.
- Upgraded a single Azure App Service application from Java 17 to Java 25 using OpenRewrite, targeted code cleanup and logic fixes, and Azure release pipeline updates for the new runtime.
- Refactored microservices to reduce technical debt and improve service stability by 20%.
- Expanded automated test coverage, contributing to a 25% reduction in production bugs.
- Improved REST API performance by 20% through logic cleanup and refactoring.
- Improved exception handling and logging across backend services to strengthen resilience.
- Identified unused document folders in existing records and introduced periodic cleanup logic to reduce storage costs.
- Supported Azure certificate lifecycle management for secure internal service communication.

Flutter Developer Intern

ABN Amro, Amsterdam

May 2023 – Jul 2023

- Built Flutter app for C4 model visualization and workflow setup.
- Prioritized requirements with MoSCoW and maintained client communication.
- Presented and delivered the project end to end.

Junior Oracle Software Developer

Attido SIA, Riga

Dec 2021 – Aug 2022

- Developed and supported Oracle NetSuite solutions using SuiteScript 2.x and PL/SQL.
- Built BI and OCS reports and automated functional tests using Postman and SoapUI.

Education

B.Sc. Computer Science & Engineering

TU Delft, The Netherlands — *Jul 2024*
